Well Kitten Plan 2008

Congratulations on your new kitten! To keep your kitten healthy, we offer a PREPAID health plan that includes: all vaccines, professional health examinations, laboratory tests, pre-anesthetic bloodwork, and surgical sterilization (including IV catheter for safety and pain medication for comfort). Combine this medical coverage with lots of TLC, kitten socialization and training and you'll be off to a great start. Kittens are vaccinated for Rhinotracheitis, Calici, Panleukopenia (Distemper), Feline Leukemia, and Rabies.

Here's our recommended schedule for vaccines and medical procedures:

8-10 WEEKS OF AGE: Physical Exam, FVRCP #1, Leukemia test, & Deworming

8-10 WEEKS OF AGE: Laboratory fecal exam to check for internal parasites (worms)

10-12 WEEKS OF AGE: Leukemia vaccine #1

12-16 WEEKS OF AGE: Brief Exam, FVRCP #2, and Deworming

14-16 WEEKS OF AGE: Leukemia vaccine #2 & nail trim lesson by one of our technicians or doctor's assistants

Follow-up laboratory fecal exam to check for internal parasites

6 MONTHS OF AGE: Pre-Anesthetic Blood Screen & Sterilization Surgery: Spay for females, Neuter for males; Rabies vaccine; and a Microchip (permanent pet identification)

The total cost of the **WELL KITTEN PLAN** for male cats is \$567; for females it's \$617. This is a 20% savings or \$142 - 156 versus purchasing these services on a visit-by-visit basis. All we ask is you purchase this plan on your first visit or we can split it into 2 payments.

PEACE OF MIND BONUS: If your kitten needs to be examined for an accident or illness during our regular office hours during their first year, you will be charged a brief exam only, (instead of a regular exam or urgent care exam). All other services and supplies will be charged at regular price.

Refunds may be given for unusual circumstances for the unused portion of the fee. However, full price of the services will be deducted to determine the amount of refund.
